

AIRMAC

HEAVY DUTY INDUSTRIAL
AIR COMPRESSORS

T20

No. 1 Best Seller

240 Volt Series II

Airmac belt driven reciprocating air compressors are proudly built for Australia by factory trained technicians using a premium selection of genuine brand name components. The many thousands of Airmac units already in service throughout the country are working proof that they are the finest quality air compressors available today.

Domestic, trade and small industrial users who need a reliable heavy duty air compressor need look no further than Airmac's latest 240 Volt range. With a choice of four portables and a giant stationary model, there's an Airmac air compressor to suit just about every application.

V13

Largest 10 Amp Unit

T17

Slow Revving, Low Noise

T20LG

Ideal for Bore Water Pumps

TT40

Giant 240 Volt Twin Pump

AIRMAC

HEAVY DUTY INDUSTRIAL AIR COMPRESSORS

Unique Features

- Genuine Fusheng reciprocating air compressor pump. Low speed, single stage, full cast iron construction with a worldwide reputation for outstanding performance and reliability. Well proven in Australia for more than 25 years.
- Superior pump design with a high strength forged steel crankshaft, low friction roller main bearings, extra large oil reservoir, long life piston rings, precision machined cylinders, deep directional cooling fins, robust plate-type inlet and exhaust valves, and low noise air intakes with replaceable filter elements.
- Genuine TECO electric compressor duty motor. Specially designed with a heavy duty rolled steel frame, pressed steel fan cowl and capacitor cover, built-in thermal overload protection, and the highest quality capacitors and sealed bearings.
- Fully automatic motor control provided by a precision German made Condor pressure switch fitted with a soft-start unloader valve. The TT40 model also has an electronic dual DOL motor controller to minimize starting current and to ensure parallel motor operation under all load conditions.
- Extended service life V-belt drive fully enclosed by an impact resistant metal safety guard designed for easy maintenance access and high flow-through cooling. Machined steel baseplate facilitates accurate pump and motor alignment.
- Oversized air receiver tank designed and manufactured in accordance with Australian Standard AS 1210. Portable sets are mounted on four sturdy wheels for ease of movement without manual lifting. Stationary sets are mounted on pallet feet for quick and safe handling with a forklift.
- Premium grade fasteners, fittings and copper piping used throughout. High flow, low back pressure brass check valve. Air tank and belt guard are abrasive blast cleaned prior to application of a three-stage paint system for long lasting corrosion protection.
- Fully compliant with Australian Safety Standards and Regulations for industrial workplace use.
- 2-year parts and factory labour warranty (excluding the motor, which is covered by a 12-month warranty) supplemented by an Australia-wide dealer network offering sales, service and genuine spare parts backup.

- Maximum outlet pressure is factory preset at 126 psi (870 kPa), but can be adjusted up to 142 psi (980 kPa) for special applications.
- Performance ratings are determined in accordance with Australian Standard AS 4637-2006.
- All portable models are fitted with a genuine Nitto air outlet coupling.
- Filter/regulators are not supplied as standard, but can be purchased separately.

Airmac air compressors are fitted with genuine Fusheng cast iron reciprocating pumps. Avoid poor quality counterfeit products by always checking for the Fusheng logo and model number that are cast into the crankcase of every genuine Fusheng air compressor pump.
